

The **Natus Biliband Eye Protector** provides exceptional eye protection for neonatal phototherapy.

"We liked the Biliband (eye protector) better than the goggles our first preemie had to use! The goggles didn't stay on nearly as well as the Biliband."

- Jason W., Greenwood, IN

"We like the new Bilibands because they stay in position better than our previous products and they are gentle on the baby's skin."

- Children's Hospital, New Orleans, LA

Blocks harmful light to baby's eyes

- Provides protection from phototherapy light
- Special eye-pad material blocks light to the eyes, while headband design allows phototherapy light to reach baby's head

Provides a perfect fit

- Remains securely in place with unique Y-shaped design
- Conforms to any head shape with easy-to-use, adjustable tabs

Safe and comfortable

- Patented material minimizes the risk of skin irritation and is not made with natural rubber latex.
- Feels soft and comfortable around baby's head and face
